

ABSTRACT OF THE DISCLOSURE

A display device provided in a gaming machine such as a slot machine or a pachinko machine is equipped, wherein a pitch  $P$  between pixel units each of which is formed by arranging each kind of a plurality of kinds of pixel electrodes which display predetermined colors respectively, and a distance  $d$  from the display device to a player in a normal game posture satisfy the relationship of  $P < \tan (\pi/180/35) \times d$ .
